For: DEVICE FOR MANUFACTURING GLASS GOBS

Asst. Commissioner for Patents  
Washington, D.C. 20231

Information Disclosure Statement

Sir:

Submitted herewith is a copy of art together with a form listing the same for the convenience of the Examiner.

The French patent discloses a device for supporting glass objects on a stream of air. Air conduits 2 in Fig. 2 are located in a non-porous and non-permeable material. This means that additional connecting conduits 9 - Figs. 2 and 3 - are provided to reach the upper surface. This results in an extremely inhomogenous distribution of air at the surface, not suitable for forming of glass gobs. This is in contrast to the objective of the invention, i.e. to provide a homogenous gas cushion.

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to: Asst. Commissioner for Patents, Washington, D.C. 20231 on June 13, 2002:
